

## radio: voice- and data transmission: description

- Speech and data transmission via Ethernet / voice over TCP/IP
- Interconnection of 2 or more computers
- Immediately persons can talk to one another via Internet and /or Intranet using microphone and headphones/speakers
- Internet: compressed
- Intranet: compressed or uncompressed
- In simplex mode: one talks, the others listen
- We provide you with our developed software
- We deliver the PCs and the hardware if desired
- Installation possible at your side

Very interesting solution e.g.:

- CallCenter
- Exchange services: speech forwarding from one city to another via Internet/Intranet: no more telephone/leased line necessary
- Radio engineering (taxi main office): switching to radio sets possible
